

# Developing Software

For every software project, you will need to develop a plan. This plan should include the following:

- A list of requirements
- A list of tasks to be completed
- A list of resources needed
- A list of risks
- A list of milestones

## Requirements Gathering

Requirements gathering is the process of identifying and documenting the requirements for a software project. It is a critical step in the software development process.

- Interview stakeholders
- Conduct user surveys
- Analyze existing systems

- Review requirements
- Prioritize requirements
- Validate requirements
