5. **Conclusion**

The study aims to investigate the impact of climate change on the global economy. It focuses on the role of renewable energy sources in reducing carbon emissions and promoting sustainable growth. The research methodology involves a combination of quantitative and qualitative data analysis. The results show that renewable energy adoption is crucial for achieving net-zero emissions by 2050. The conclusion highlights the need for international cooperation and policy support to accelerate the transition to a green economy.

RESEARCH METHODOLOGY

The research methodology is divided into two main sections: data collection and data analysis. The data collection phase involves gathering primary and secondary data from various sources. The data analysis phase includes statistical modeling and qualitative interpretation of the findings.
